

Build your very own LEGO® QR code and access the AR Through the Bricks experience to explore the new LEGO® Harry Potter® Diagon Alley™ set

1

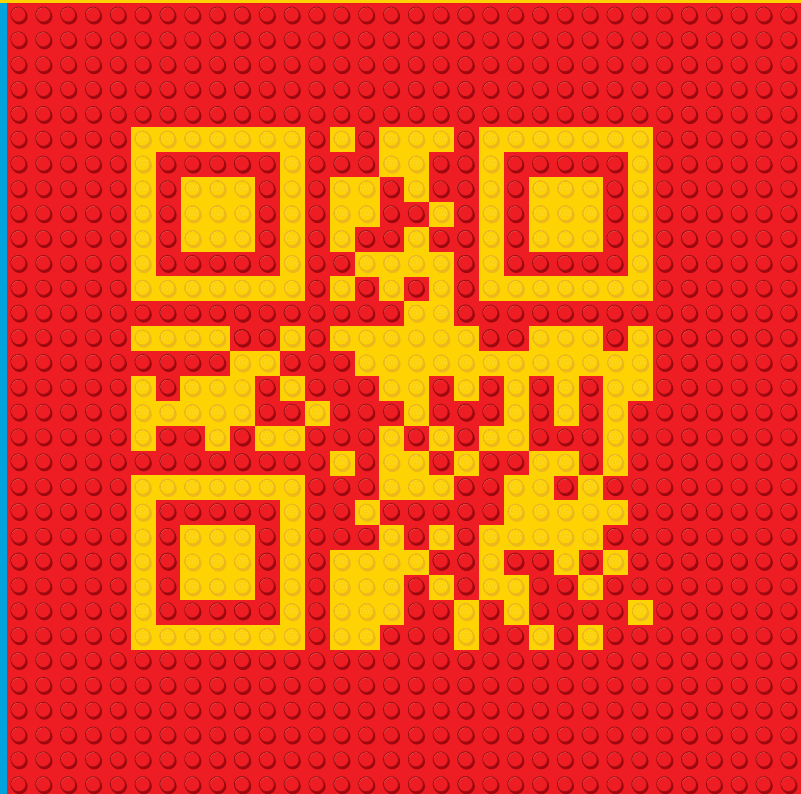

You will need a 32×32 LEGO dot base plate and a selection of bricks in contrasting colours. So if using a pale coloured base plate, choose a dark colour for your bricks

2

Build the code following the pattern map below covering the correct dots on the base plate

3

You can be super creative with the bricks you use; the important thing is to match your bricks to the shape shown. The QR code design has been chosen so that you can easily build it with bricks you have at home

Please turn over to see how the LEGO team has built the QR code design in the four Harry Potter colours.
